## ERRORS

626 0

### 451 structured data items are invalid

About this issue: This issue is triggered if structured data items contain fields that do not meet Google's guidelines <https://developers.google.com/search/docs/data-types/article>. Implementing and maintaining your structured data correctly is important if you want to get an edge over your competitors in search results. If your website markup has errors, crawlers will not be able to properly understand it, and you may run the risk of losing the chance of gaining rich snippets and getting more favorable rankings.

For more information on the structured data requirements, see <https://schema.org>, Google documentation <https://developers.google.com/search/docs/data-types/article> or our article <https://www.semrush.com/kb/1084-structured-data-items-site-audit>. How to fix: Check structured data on your webpages with a validation tool. Please note that different markup testing tools may show different results.

We recommend that you use the Rich Results Test tool <https://search.google.com/test/rich-results> to review and validate your pages' structured data against their rich snippet requirements.

451 0

### 86 hreflang conflicts within page source code

About this issue: If you're running a multilingual website, it is necessary to help users from other countries find your content in the language that is most appropriate for them. This is where the hreflang (rel="alternate" hreflang="x") attribute comes in handy. This attribute helps search engines understand which page should be shown to visitors based on their location.

It is very important to properly synchronize your hreflang attributes within your page's source code, otherwise you may experience unexpected search engine behavior. For more information, see this article <https://support.google.com/webmasters/answer/189077?hl=en>. How to fix: To avoid any conflicts, we recommend that you review your hreflang attributes within your page's source code and fix any of the following issues: 1.

Conflicting hreflang and rel=canonical URLs. 2. Conflicting hreflang URLs. 3. No self-referencing hreflang URLs.

86 0

### 86 issues with incorrect hreflang links

About this issue: A hreflang (rel="alternate" hreflang="x") attribute helps search engines understand which page should be shown to visitors based on their location. Utilizing this attribute is necessary if you're running a multilingual website and would like to help users from other countries find your content in the language that is most appropriate for them. It is very important to make sure your hreflang links always refer to absolute URLs with HTTP 200 status codes, otherwise search engines will not be able to interpret them correctly and, as a result, will not show the correct language version of your pages to the relevant audience.

For more information, please see these article - Tell Google about localized versions of your page: <https://support.google.com/webmasters/answer/189077>. How to fix: To avoid any problems with hreflang links, we recommend that you review your hreflang attributes and do the following: 1. Fix broken hreflang URLs.

2. Fix hreflang redirects. 3.

Replace relative URLs with absolute ones.

86 0

**1 page returned a 4XX status code**

10

About this issue: A 4xx error means that a webpage cannot be accessed. This is usually the result of broken links. These errors prevent users and search engine robots from accessing your webpages, and can negatively affect both user experience and search engine crawlability.

This will in turn lead to a drop in traffic driven to your website. Please be aware that crawler may detect a working link as broken if your website blocks our crawler from accessing it.

This usually happens due to the following reasons: 1.

DDoS protection system. 2. Overloaded or misconfigured server.

How to fix: If a webpage returns an error, remove all links leading to the error page or replace it with another resource. To identify all pages on your website that contain links to a 4xx page, click "View broken links" next to the error page. If the links reported as 4xx do work when accessed with a browser, you can try either of the following: 1.

Contact your web hosting support team. 2. Instruct search engine robots not to crawl your website too frequently by specifying the "crawl-delay" directive in your robots.txt.

**1 internal link is broken**

10

About this issue: Broken internal links lead users from one webpage to another and bring them to non-existent webpages. Multiple broken links negatively affect user experience and may worsen your search engine rankings because crawlers may think that your website is poorly maintained or coded. Please note that our crawler may detect a working link as broken.

Generally, this happens if the server hosting the website you're referring to blocks our crawler from accessing this website. How to fix: Please follow all links reported as broken. If a target webpage returns an error, remove the link leading to the error page or replace it with another resource.

If the links reported as broken do work when accessed with a browser, you should contact the website's owner and inform them about the issue.

**1 page couldn't be crawled (DNS resolution issue)**

10

About this issue: A DNS resolution error is reported when our crawler can't resolve the hostname when trying to access your webpage. How to fix: Please contact your web hosting technical support and ask them to investigate and fix the issue.

**0 pages returned 5XX status code**

00

**0 pages don't have title tags**

00

**0 issues with duplicate title tags**

00

0 issues with broken internal JavaScript and CSS files	0
0 subdomains don't support secure encryption algorithms	0
0 sitemap.xml files are too large	0
0 links couldn't be crawled (incorrect URL formats)	0
0 pages are missing the viewport width value	0
0 pages have slow load speed	0

www.biosolution.tech

## WARNINGS

873 0

**678 issues with blocked internal resources in robots.txt**

About this issue: Blocked resources are resources (e.g., CSS, JavaScript, image files, etc.) that are blocked from crawling by a "Disallow" directive in your robots.txt file. By disallowing these files, you're preventing search engines from accessing them and, as a result, properly rendering and indexing your webpages. This, in return, may lead to lower rankings.

For more information, please see <a

href="https://developers.google.com/search/docs/advanced/robots/intro" target="\_blank"

rel="noreferrer">this article</a>. How to fix: To unblock a resource, simply update your robots.txt file.

678 0

**86 external links are broken**

About this issue: Broken external links lead users from one website to another and bring them to non-existent webpages. Multiple broken links negatively affect user experience and may worsen your search engine rankings because crawlers may think that your website is poorly maintained or coded. Please note that our crawler may detect a working link as broken.

Generally, this happens if the server hosting the website you're referring to blocks our crawler from accessing this website. How to fix: Please follow all links reported as broken. If a target webpage returns an error, remove the link leading to the error page or replace it with another resource.

If the links reported as broken do work when accessed with a browser, you should contact the website's owner and inform them about the issue.

86 0

**43 pages have low text-HTML ratio**

About this issue: Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less. Search engines have begun focusing on pages that contain more content.

That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results. Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster.

How to fix: Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.

43 0

**26 pages have a low word count**

About this issue: This issue is triggered if the number of words on your webpage is less than 200. The amount of text placed on your webpage is a quality signal to search engines.

Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts.

For more information, please view this video: <https://www.youtube.com/watch?v=w3-obcXkyA4>.

How to fix: Improve your on-page content and be sure to include more than 200 meaningful words.

26 0

**23 pages don't have an h1 heading**

23 0

About this issue: While less important than <title> tags, h1 headings still help define your page's topic for search engines and users. If an <h1> tag is empty or missing, search engines may place your page lower than they would otherwise. Besides, a lack of an <h1> tag breaks your page's heading hierarchy, which is not SEO friendly.

How to fix: Provide a concise, relevant h1 heading for each of your page.

**16 pages have too much text within the title tags**

16 0

About this issue: Most search engines truncate titles containing more than 70 characters. Incomplete and shortened titles look unappealing to users and won't entice them to click on your page. For more information, please see this Google article:

<https://support.google.com/webmasters/answer/35624>.

How to fix: Try to rewrite your page titles to be 70 characters or less.

**Sitemap.xml not found**

1 0

About this issue: A sitemap.xml file is used to list all URLs available for crawling. It can also include additional data about each URL. Using a sitemap.xml file is quite beneficial.

Not only does it provide easier navigation and better visibility to search engines, it also quickly informs search engines about any new or updated content on your website.

Therefore, your website will be crawled faster and more intelligently. How to fix: Consider generating a sitemap.xml file if you don't already have one.

Then you should specify the location of your sitemap.xml files in your robots.txt, and check if Googlebot can index your sitemap.xml file with the Sitemaps report in Google Search Console: [https://search.google.com/search-console/not-verified?original\\_url=/search-console/sitemaps&original\\_resource\\_id](https://search.google.com/search-console/not-verified?original_url=/search-console/sitemaps&original_resource_id).

00

0 issues with unminified JavaScript and CSS files

00

0 link URLs are too long

00

www.biosolution.tech

## NOTICES

280

### 27 pages have only one incoming internal link

About this issue: Having few incoming internal links means little to no visits or chances of being placed in search results. AI search engines use internal linking patterns to understand content importance and relationships within your site's knowledge network. Pages with few internal links may look less authoritative to AI algorithms and reduce your content's visibility and citation potential.

How to fix: Add more incoming internal links to pages with important content.

270

### lms.txt not found

About this issue: The lms.txt file helps AI search engines better understand your website's content by providing LLM-friendly information. This file offers a short summary, guidance, and links to other useful resources. How to fix: 1.

Create an lms.txt file. 2. Place it in your website's root directory and ensure the file is accessible.

3. Refer to llmstxt.org for examples and tips on how to properly create and manage it.

10

0 pages have more than one H1 tag

00

0 pages are blocked from crawling

00

0 page URLs are longer than 200 characters

00

0 outgoing external links contain nofollow attributes

00

Robots.txt not found

00

0 pages have hreflang language mismatch issues

00

0 subdomains don't support HSTS

00

0 orphaned pages in Google Analytics

00

0 orphaned pages in sitemaps

00

0 pages blocked by X-Robots-Tag: noindex HTTP header

00

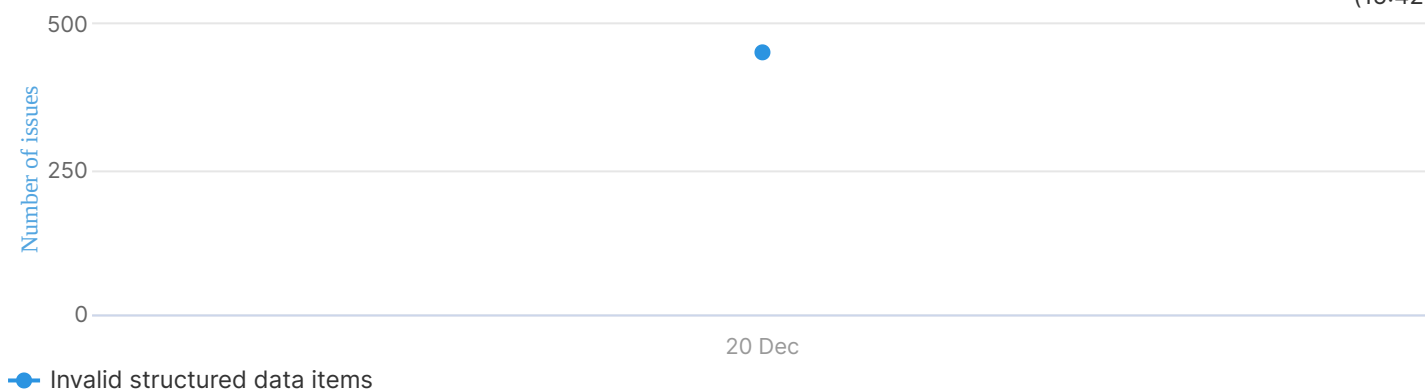

0 issues with blocked external resources in robots.txt	00
0 issues with broken external JavaScript and CSS files	00
0 pages need more than 3 clicks to be reached	00
0 URLs with a permanent redirect	00
0 resources are formatted as page link	00
0 links on this page have no anchor text	00
0 links have non-descriptive anchor text	00
0 links to external pages or resources returned a 403 HTTP status code	00
Llms.txt has formatting issues	00
0 pages contain too much content	00
0 pages have outdated content	00
0 pages have low semantic HTML usage	00
0 pages require content optimization	00

## Invalid structured data items

- i** About this issue: This issue is triggered if structured data items contain fields that do not meet Google's guidelines <https://developers.google.com/search/docs/data-types/article>. Implementing and maintaining your structured data correctly is important if you want to get an edge over your competitors in search results. If your website markup has errors, crawlers will not be able to properly understand it, and you may run the risk of losing the chance of gaining rich snippets and getting more favorable rankings. For more information on the structured data requirements, see <https://schema.org>, Google documentation <https://developers.google.com/search/docs/data-types/article> or our article <https://www.semrush.com/kb/1084-structured-data-items-site-audit>. How to fix: Check structured data on your webpages with a validation tool. Please note that different markup testing tools may show different results. We recommend that you use the Rich Results Test tool <https://search.google.com/test/rich-results> to review and validate your pages' structured data against their rich snippet requirements.

## Hreflang conflicts within page source code

**i** About this issue: If you're running a multilingual website, it is necessary to help users from other countries find your content in the language that is most appropriate for them. This is where the hreflang (rel="alternate" hreflang="x") attribute comes in handy. This attribute helps search engines understand which page should be shown to visitors based on their location. It is very important to properly synchronize your hreflang attributes within your page's source code, otherwise you may experience unexpected search engine behavior. For more information, see this article <https://support.google.com/webmasters/answer/189077?hl=en>. How to fix: To avoid any conflicts, we recommend that you review your hreflang attributes within your page's source code and fix any of the following issues: 1. Conflicting hreflang and rel=canonical URLs. 2. Conflicting hreflang URLs. 3. No self-referencing hreflang URLs

Historical chart for audits

Period: December 20, 2025 (15:42) - December 20, 2025 (15:42)

Hreflang conflicts within page source code 86

## Issues with incorrect hreflang links

- i** About this issue: A hreflang (rel="alternate" hreflang="x") attribute helps search engines understand which page should be shown to visitors based on their location. Utilizing this attribute is necessary if you're running a multilingual website and would like to help users from other countries find your content in the language that is most appropriate for them. It is very important to make sure your hreflang links always refer to absolute URLs with HTTP 200 status codes, otherwise search engines will not be able to interpret them correctly and, as a result, will not show the correct language version of your pages to the relevant audience. For more information, please see these article - Tell Google about localized versions of your page: <https://support.google.com/webmasters/answer/189077>. How to fix: To avoid any problems with hreflang links, we recommend that you review your hreflang attributes and do the following: 1. Fix broken hreflang URLs. 2. Fix hreflang redirects. 3. Replace relative URLs with absolute ones

## 4xx errors

- i** About this issue: A 4xx error means that a webpage cannot be accessed. This is usually the result of broken links. These errors prevent users and search engine robots from accessing your webpages, and can negatively affect both user experience and search engine crawlability. This will in turn lead to a drop in traffic driven to your website. Please be aware that crawler may detect a working link as broken if your website blocks our crawler from accessing it. This usually happens due to the following reasons: 1. DDoS protection system. 2. Overloaded or misconfigured server. How to fix: If a webpage returns an error, remove all links leading to the error page or replace it with another resource. To identify all pages on your website that contain links to a 4xx page, click "View broken links" next to the error page. If the links reported as 4xx do work when accessed with a browser, you can try either of the following: 1. Contact your web hosting support team. 2. Instruct search engine robots not to crawl your website too frequently by specifying the "crawl-delay" directive in your robots.txt

## Broken internal links

- i** About this issue: Broken internal links lead users from one webpage to another and bring them to non-existent webpages. Multiple broken links negatively affect user experience and may worsen your search engine rankings because crawlers may think that your website is poorly maintained or coded. Please note that our crawler may detect a working link as broken. Generally, this happens if the server hosting the website you're referring to blocks our crawler from accessing this website. How to fix: Please follow all links reported as broken. If a target webpage returns an error, remove the link leading to the error page or replace it with another resource. If the links reported as broken do work when accessed with a browser, you should contact the website's owner and inform them about the issue.

DNS resolution issue

**i** About this issue: A DNS resolution error is reported when our crawler can't resolve the hostname when trying to access your webpage. How to fix: Please contact your web hosting technical support and ask them to investigate and fix the issue.

Historical chart for audits

Period: December 20, 2025 (15:42) - December 20, 2025 (15:42)

Blocked internal resources in robots.txt

**i** About this issue: Blocked resources are resources (e.g., CSS, JavaScript, image files, etc.) that are blocked from crawling by a "Disallow" directive in your robots.txt file. By disallowing these files, you're preventing search engines from accessing them and, as a result, properly rendering and indexing your webpages. This, in return, may lead to lower rankings. For more information, please see <a href="https://developers.google.com/search/docs/advanced/robots/intro" target="\_blank" rel="noreferrer">this article</a>. How to fix: To unblock a resource, simply update your robots.txt file.

*We're only displaying 100 results. To view all results, export your report to a CSV or Excel file format.*

## Broken external links

*About this issue: Broken external links lead users from one website to another and bring them to non-existent webpages. Multiple broken links negatively affect user experience and may worsen your search engine rankings because crawlers may think that your website is poorly maintained or coded. Please note that our crawler may detect a working link as broken. Generally, this happens if the server hosting the website you're referring to blocks our crawler from accessing this website. How to fix: Please follow all links reported as broken. If a target webpage returns an error, remove the link leading to the error page or replace it with another resource. If the links reported as broken do work when accessed with a browser, you should contact the website's owner and inform them about the issue.*

## Historical chart for audits

Period: December 20, 2025 (15:42) - December 20, 2025 (15:42)

## Broken external links 86

## Low text to HTML ratio

- i** About this issue: Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less. Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results. Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster. How to fix: Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.

## Historical chart for audits

Period: December 20, 2025 (15:42) - December 20, 2025 (15:42)

## Low text to HTML ratio 43

## Low word count

- i** About this issue: This issue is triggered if the number of words on your webpage is less than 200. The amount of text placed on your webpage is a quality signal to search engines. Search engines prefer to provide as much information to users as possible, so pages with longer content tend to be placed higher in search results, as opposed to those with lower word counts. For more information, please view this video: <https://www.youtube.com/watch?v=w3-obcXkyA4>. How to fix: Improve your on-page content and be sure to include more than 200 meaningful words.

## Missing h1

- i** About this issue: While less important than <title> tags, h1 headings still help define your page's topic for search engines and users. If an <h1> tag is empty or missing, search engines may place your page lower than they would otherwise. Besides, a lack of an <h1> tag breaks your page's heading hierarchy, which is not SEO friendly. How to fix: Provide a concise, relevant h1 heading for each of your page.

## Historical chart for audits

## Long title element

- i** About this issue: Most search engines truncate titles containing more than 70 characters. Incomplete and shortened titles look unappealing to users and won't entice them to click on your page. For more information, please see this Google article: <https://support.google.com/webmasters/answer/35624>. How to fix: Try to rewrite your page titles to be 70 characters or less.

## Historical chart for audits

Period: December 20, 2025 (15:42) - December 20, 2025 (15:42)

## Sitemap.xml not found

**i** *About this issue: A sitemap.xml file is used to list all URLs available for crawling. It can also include additional data about each URL. Using a sitemap.xml file is quite beneficial. Not only does it provide easier navigation and better visibility to search engines, it also quickly informs search engines about any new or updated content on your website. Therefore, your website will be crawled faster and more intelligently. How to fix: Consider generating a sitemap.xml file if you don't already have one. Then you should specify the location of your sitemap.xml files in your robots.txt, and check if Googlebot can index your sitemap.xml file with the Sitemaps report in Google Search Console: [https://search.google.com/search-console/not-verified?original\\_url=/search-console/sitemaps&original\\_resource\\_id](https://search.google.com/search-console/not-verified?original_url=/search-console/sitemaps&original_resource_id)*

## Pages with only one internal link

- i** About this issue: Having few incoming internal links means little to no visits or chances of being placed in search results. AI search engines use internal linking patterns to understand content importance and relationships within your site's knowledge network. Pages with few internal links may look less authoritative to AI algorithms and reduce your content's visibility and citation potential. How to fix: Add more incoming internal links to pages with important content.

## Llms.txt not found

- i** About this issue: The `llms.txt` file helps AI search engines better understand your website's content by providing LLM-friendly information. This file offers a short summary, guidance, and links to other useful resources. How to fix: 1. Create an `llms.txt` file. 2. Place it in your website's root directory and ensure the file is accessible. 3. Refer to [llmstxt.org](https://llmstxt.org) for examples and tips on how to properly create and manage it.
